HOW DOES IT WORK ?

BeanGateway
2.4GHz Indoor Version

Wireless IIOT Sensors Cloud
[IEEE 802.15.4]

APPLICATIONS

A MULTI-PROTOCOL WIRELESS IIOT SENSORS COORDINATOR

The **BeanGateway® 2.4GHz Modbus** is used to build and manage **Beanair®** wireless IIOT sensors. It can manage queues for every network element (**BeanDevice® 2.4GHz**). As a gateway, it controls the external access to the network through a highly secured authentication procedure. It supports the conversion of data exchanged, compression and IP connectivity with the network thereby reducing the intelligence required in these platforms, maintenance and therefore the associated cost. The **BeanGateway® 2.4GHz Modbus** is also equipped with various communication interfaces with the customers IT infrastructure (Modbus over RS232/RS485, Modbus TCP, Ethernet - TCP / IP / UDP / DHCP / DNS).

ADVANCED UNINTERRUPTIBLE POWER SUPPLY (UPS)

The **BeanGateway® 2.4GHz Modbus** operates with an external power supply (DC 8-28V). An integrated rechargeable battery with a capacity of 950mAh is used as an UPS battery (uninterruptible power supply). The internal battery provides instantaneous protection from external power supply interruptions, the wireless IIOT sensors activity & Ethernet LAN activity are maintained during this time (3h00 to 3h30 approximately). An internal buzzer emits a beep sound every 2 seconds in case the external power supply is disconnected.

EMBEDDED WIRELESS IIOT SENSORS DIAGNOSTIC TOOL

The **BeanGateway® 2.4GHz Modbus** provides a wireless IIOT sensors diagnostic tool useful for resolving some common networking troubleshooting :

- Energy Scan for choosing the more appropriate RF Channel
- **BeanDevice® 2.4GHz** PER (Packet Error Rate) calculation
- LQI (Link Quality Indicator) between the **BeanGateway® 2.4GHz Modbus** and the **BeanDevice® 2.4GHz**
