EMBEDDED DATA LOGGER UP TO 1 MILLION DATA POINTS

The [BeanDevice® 2.4GHz ONE-TH](#) integrates an embedded datalogger, which can be used to log data when a Wireless IIOT Sensors can not be easily deployed on your site. All the data acquisition are stored on the embedded flash and then transmitted to the [BeanGateway® 2.4GHz](#) when a Wireless IIOT Sensors is established.

The dataLogger function is compatible with all the data acquisition mode available on your [BeanDevice® 2.4GHz ONE-TH](#) :

- LowDutyCycle Data Acquisition
- Survey

BeanDevice® 2.4GHz ONE-TH

EXAMPLE : HVAC MONITORING

- In standalone operation, the BeanDevice® 2.4GHz ONE-TH stores all the measurements on its embedded datalogger. Thus, a direct connection with the BeanGateway® 2.4GHz is not needed.
- The temperature & humidity in the HVAC system are monitored and all the acquired measurements are logged on the embedded flash.
- Data logs can be transmitted to the BeanGateway® 2.4GHz on request. Once a successful transmission is done, the user can choose to erase automatically the logs from the datalogger memory, so new ones can be stored

DEW POINT MEASUREMENT

The **BeanDevice® 2.4GHz ONE-TH**, comes with DewPoint measurement capability which makes it suitable for Greenhouses monitoring. The dew point is the temperature at which the water vapor in a sample of air at constant barometric pressure condenses into liquid water at the same rate at which it evaporates. When the air temperature cools to the dew point temperature, or if the dew point rises to equal the air temperature, the **BeanDevice® 2.4GHz ONE-TH** transmits the information, so the user can prevent the formation of dews.

REMOTE CONFIGURATION & MONITORING

BeanScape® 2.4GHz Basic

The **BeanScape® 2.4GHz** application allows the user to view all the data measurements transmitted by the **BeanDevice® 2.4GHz One-TH**. With the OTAC (Over-the-Air configuration) feature, the user can remotely configure the **BeanDevice® 2.4GHz ONE-TH**

SEVERAL DATA ACQUISITION MODES ARE AVAILABLE ON THE BEANDEVICE® 2.4GHz ONE-TH:

- **Low Duty Cycle Data Acquisition mode (LDCDA)** : the data acquisition is immediately transmitted by radio. The transmission frequency can be configured from 1s to 24h.
- **Survey Mode** : the measured value is transmitted by radio whenever an alarm threshold (fixed by the user) is detected (4 alarms threshold levels High/Low). Meanwhile, the device sends frequently a beacon frame informing its current status.

BeanScape® 2.4GHz Premium+ Add-on

The **BeanScape® 2.4GHz Premium+** integrates an OPC DA server (Data Access). OPC DA is particularly well suited for real time measurement and data sharing. Each data/measurement can be associated to a tag or its attributes and shared with one or many OPC clients
