eddyNCDT // Eddy current sensors for displacement and position

- Easy sensor replacement
- Configuration via web browser
- High temperature stability, resolution and linearity
- Frequency response 25 kHz (-3dB)
- Multi channel applications: synchronisation of up to 10 controller

System design

The eddyNCDT 3100 includes an extremely compact controller and a displacement sensor. The sensors are connected through a 3m or 9m integrated, highly flexible cable and connected to the controller by a user-friendly push-pull plug-in connection.

The controller housing is made from solid cast aluminium and is protected to IP65. Alternative mounting options are slot nuts, mounting holes or a mounting rail. The robust sensors make the eddyNCDT 3100 system ideally suited to measurement tasks in the industrial environment.

Versatile in application

The eddyNCDT 3100 series is the new generation of eddy current displacement measurement systems. The measurement system uses a patented temperature compensation method to provide firstclass stability even with fluctuating temperatures. These sensors are an excellent choice when you need high precision in harsh industrial environments (pressure, dust, temperature).

Sensors and cables come with an integrated memory module that stores all the major sensor and cable data. All sensors are factory calibrated to adjust to ferromagnetic and non-ferromagnetic materials.

Multi-channel synchronisation

In the case that more sensors of the series eddyNCDT 3100 are operated next to each other, an influence due to a hardly different oscillator frequency (beat frequency) is possible. This can be avoided by synchronisation. The eddyNCDT 3100-SM is equipped with two additional connectors for the oscillator output („SYNC OUT“) and for the input („SYNC IN“). The electronics is working independently until a connection is built. By means of the connections with the synchronisation cable SC3100-0,3, the electronics switch automatically to synchronisation mode. In this way, two up to ten systems can be synchronised with each other.

All settings are made in the intuitive web interface, eliminating the need for any special software.

Cable

Cable design: coaxial
 Sheath material: TPE-U/ thermoplastic elastomers
 Temperature resistance: -40°C to +90°C
 Outer diameter: 2.90mm ±0.2mm
 Length tolerance: ±15%
 Bending radius: one-time bending during installation: 7.5 x cable diameter
 minimum bending radius for movement: 15 x cable diameter
 Suitable for use with robots: no

Plug Model

Type: 6-pole male connector
 Locking method: push-pull
 Protection class: IP68 (when connected)
 Temperature resistance: -40 to +120°C
 Material housing: Copper, nickel-plated
 Mechanical service life: > 500 mating cycles

Controller side
