RELIABLE PRESSURE MEASUREMENT TECHNOLOGY DEMANDS A STRONG CORE TECHNOLOGY

A carefully produced pressure sensor is the best prerequisite for accurate measurement results over the entire product life. Pressure transmitters using piezoresistive semiconductor technology are characterized by their high sensitivity and reliability, which is why pressures even in the mbar range can be recorded with great precision. Procedures such as the compensation of temperature-based errors ensure the highest of measurement accuracy. Our pressure transmitters are also highly robust in terms of overpressure.

The strengths of our core technology at a glance:

High precision, low total error

Temperature errors are already compensated during production. Each product is optimized for its respective application.

Overpressure

Our standard pressure transmitters can typically tolerate three times the measurement range without suffering any damage. The overpressure can also be tailored according to customer requirements.

Pressure hysteresis and non-repeatability of negligible value

Pressure hysteresis and non-repeatability are uncompensable measurement errors, but due to the high-quality piezoresistive technology of our products, these remain extremely low. The error caused by non-repeatability and hysteresis is typically 0.01% of the applied pressure.

Excellent long-term stability

We use only high-quality measuring cells. To achieve outstanding long-term stability, these are thermally treated. This reduces measurement errors to a minimum and significantly reduces the measurement uncertainty.

Reliable core technology: Piezoresistive measuring cells

PROCESS CONNECTION OVERVIEW

A wide selection of materials for optimally matched solutions

A large selection of sealant and housing materials, including stainless steel, Hastelloy® and titanium, as well as various transmission fluids, ensures the lifetime optimization of our solutions across many applications.

¹ Titanium available up to ≤ 400 bar, max. overpressure 550 bar

² Hastelloy available up to ≤ 600 bar, max. overpressure 850 bar

³ Version available up to 250 bar, max. overpressure 300 bar

⁴ Elastomer free version available from 30 bar up to 690 bar, max. overpressure 850 bar

STS SENSOR TECHNIK SIRNACH – YOUR PARTNER FOR INDUSTRIAL PRESSURE MEASUREMENT TECHNOLOGY

STS Sensor Technik Sirnach has been developing and producing complete solutions since 1987 for customer-specific applications and systems in the field of pressure measurement. Due to our close cooperation with customers and suppliers, STS Sensor Technik Sirnach is able to convert customer requirements into high-quality products at short notice.

STS Sensor Technik Sirnach places the highest demands upon the quality, precision, reliability and longevity of its sensors and component parts.

Subsidiaries in Germany, Italy, France, Great Britain and China, as well as our competent sales partners, guarantee the worldwide sales and service of the STS product portfolio.

What STS stands for

- Individual, customer-specific products
- High quality products of extended longevity
- Accuracy and signal stability guaranteed by in-house measurement cell production
- 10–15 day delivery times for custom products

Whether as a supplier to the world's largest manufacturers of industrial machinery across various applications, or directly as your competent local partner, our decades of experience at STS will support you in choosing the right sensor.
