VIBRATION TYPE LEVEL SWITCH

Model **KVX/XV2**

**HIGHLY SENSITIVE & COMPACT VIBRATION LEVEL SWITCH
MEETING DEMANDING PROCESSES AS WELL AS
HARD REQUIREMENTS**

DETECTING HYPOBARIC POWDER;

Standard Type can detect an object of apparent specific gravity from 0.1 or over while

Optional Type can do one from 0.03 or over.

**Reliably Detect Any Materials Whose Specific Conductivity
Or Electrical Properties May Be Varied. Because The Sensitivity Is At
The Tip Of The Sensing Plate, It May Not Be Affected By Fouling Or Build-Up At
The Plate-Root. With The Development Of New Mechanism And
New Circuitry, It Has Greatly Been Upgraded In
Terms Of Sensitivity And Reliability**

APPLICABLE TO POWDER WHOSE DETECTION IS DIFFICULT DUE TO THE SMALL APPARENT SPECIFIC GRAVITY, AND YET IT IS USER-FRIENDLY.

KVX SERIES FEATURES

- Well suited to detection of such small-gravity powders that other instruments can not measure.
- Applicable to an object whose conductivity or specific gravity varies.
- Simple operation without complex sensitivity adjustment.
- Easy maintenance with few driving parts.
- Pressure resistant with no sealing part.
- Highly sensitive to detect fine and light powders. (Specific gravity : more than 0.1) (Specific gravity : 0.03, available as option)
- Applicable to liquids.
- A remote box is prepared as a vibration countermeasure.
- An operating lamp is fixed.
- 2 types of L dimension = 180mm, 250mm

PRINCIPLE OF OPERATION

When an object gets in touch with a rod oscillated by piezoelectricity, vibration damping takes place. This damping is transferred to a relay output.

Lightweight/Compact/Quality Level Switch !!

XV2 SERIES FEATURES

Besides the same performance as that of KVX series, it is compact and lightweight. It is the level switch developed to meet the downsizing requirements in particular.

DESIGNATION OF MODEL

● NOTES FOR INSTALLATION

In case of horizontal mounting, make the cable conduit directly downward in both Flange and Screw mounting Types. An arrow on a hexagonal nut between the housing and the screw shows the mounting direction (KVX only). Make this arrow up on the hexagonal nut, while the conduit should face directly underneath. When screwing, so as to the correct direction, adjust the finishing angle with increasing or decreasing a thickness of sealant tape. When screwing, you should make the last angle adjustment within a 360 degree roll in rolling the seal tape up or down.

Apply an effective sealing material on the screw when you fix it. The detection rod must be completely protruded inside the tank.

Do not rotate the level switch with housing but with the hexagonal nut by spanner or wrench when you screw in the instrument.
