

TYPE: SHK-D

SHK-D 'D' Type Crosby™ Cabled Load Shackle

Description

The LCM range of load shackles is designed for lifting and weighing in rugged or harsh environments. The shackle pins are manufactured to an exacting specification and are machined from high tensile stainless steel to 6.5te and forged from high tensile carbon steel from 9.5te. The basic shackle uses the Crosby G2150 series.

This range of loads cells is proof loaded to 150% of the normal rated load, and is available in a range from 1 tonne to 35 tonne. The SHK-D is internally gauged and the whole instrumented area is sealed to IP67 to protect it in service.

They are simple to install and are available in standard shackle sizes. As an option, a rotating bobbin can be supplied to centralise the load and to minimise any point-load effects when the shackle is placed under load. We are also always happy to discuss any special requirements that can be accommodated.

The SHK-D series can be supplied on its own or combined with our extensive range of

SHK-D 'D' Type Crosby™ Cabled Load Shackle

Special Options

Special ranges	The SHK-D can be supplied in any range, between 1te and 35te and calibrated as required. Usually we will choose the nearest standard shackle size. We can also offer special design shackles up to 2000te.
Special electrical	The standard SHK-D cable exits the shackle pin via a gland and its connections restrained using the anti-rotation bracket. We can offer variations to the electrical connection method. For example, integral connectors, special cable length etc.
Integral signal conditioning	We can offer various integral signal conditioning options: Analogue Signals 4-20mA 2-wire current output (7.5 to 28vdc supply) For ATEX versions see note 4 & 5 4-20mA 3-wire current output (13 to 28vdc supply) For ATEX versions see note 4 0.1-5.1vdc 3-wire voltage output (8.5 to 28vdc supply) For ATEX versions see note 4 0.1-10.1vdc 3-wire voltage output (13 to 28vdc supply) For ATEX versions see note 4 Digital Signals RS232 digital - various protocols (5.4 to 18vdc supply) For ATEX versions see note 4 RS485 digital - various protocols (5.4 to 18vdc supply) For ATEX versions see note 4
Centralising bobbin	We can offer an optional centralising bobbin. This helps improve the overall accuracy in certain cable tension applications. The bobbin is shown pictorially in the drawing below.
Subsea or offshore	We are able to offer fully submersible versions, which are normally supplied with underwater mateable connectors. These versions can also be pressure tested by LCM and witnessed by a third party at any point through the manufacturing process. We regularly have ABS, Lloyds or DNV inspectors on site.
Telemetry	We have a version available that uses radio telemetry to transmit data. There is a separate data sheet for this product (TELSHACK-D).
Hazardous Area	We can supply ATEX/IECEx certified load shackles for use in Zone 1 and Zone 2 hazardous areas.
