Concerning Signal Names
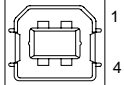

Signal names used for the serial interface on FP units are designed to match the pin order used on most PC serial interfaces, so that a straight cable can be used to connect the two. Therefore, connect each pin's signal to the same signal name on the PC side.

For example, pin #2 'RD' should be connected to the 'RD' input terminal on the PC's connector.

Refer to the FP-3500T/3600T/3650T series User Manual's section "Cable Diagrams" for each signal's direction.

IMPORTANT
- Tightening the screws with too much force can damage the FP unit's case.
- The necessary torque is 0.5N•m.

6 Wiring

⚠ WARNING

- To avoid an electric shock, when connecting the FP's power cord terminals to the power terminal block, confirm that the FP's power supply is completely turned OFF, via a breaker, or similar unit.

- To avoid the dangers of fire, electric hazards and equipment damage, be sure to use only the specified voltage when operating the FP.
- Since there is no power switch on the FP unit, be sure to attach a breaker-type switch to its power cord.

◆USB Cable Clamp Removal Feature
(1) Push in the cable clamp's stopper with a standard flat-blade screwdriver until the cable clamp is unlocked, and remove it.
(2) Disconnect the USB cable.

NOTE
- If the stopper will not move, press on <A> (shown in the figure) to free the clamp from the clamp holder.

8 Power Supply Cautions

Please pay special attention to the following instructions when connecting the power cord terminals to the FP unit.

- If the power supply voltage exceeds the FP unit's specified range, connect a voltage transformer.

10

- Between the line and the ground, be sure to use a low noise power supply. If there is still an excessive amount of noise, connect a noise reducing transformer.
- Input and Output signal lines must be separated from the power control cables for operational circuits.
- The FP unit's power supply cord should not be bundled with or kept close to main circuit lines (high voltage, high current), or input/output signal lines.
- Connect a surge absorber to handle power surges.
- To reduce noise, make the power cord as short as possible.

9 Grounding Caution

When attaching a wire to the FP unit's rear face FG terminal, (on the AC Connector), be sure to create an exclusive ground.
(Use a grounding resistance of 100Ω, a wire of $2mm^2$ or thicker, or your country's applicable standard.)

10 Input/Output Signal Line Cautions

- All FP Input and Output signal lines must be separated from all operating circuit (power) cables.
- If this is not possible, use a shielded cable and ground the shield.
11 Calibration of OSD Display Position

■ OSD Functions

You can operate the FP screen menus via the touch panel, and even if FP is operating, adjust screen image display to a minute level. The feature is called OSD (On Screen Display). The items that can be set with OSD and the functions are shown.

Example of OSD screen   "Ver.*.**" indicates the version of the OSD.
	Item	Function
	Color Settings	Adjusts the contrast and the brightness.
	Screen Settings	Adjusts the display position of the screen. (Analog RGB only)
	Custom Display	Adjusts Sharpness and the backlight brightness.
	System Settings	Changes settings such as activating the click sound.
	All Reset	Resets the current OSD value to the default value.
	Input Source	Switches Analog RGB and DVI-D.
	Auto Adjust	Automatically adjusts the display position of the screen. (Analog RGB only)
	Auto Gain	Automatically adjusts the contrast and the brightness. (Analog RGB only)
ESC	ESC	Cancels the setting and returns to the upper level.
SET	SET	Applies the setting and returns to the upper level.
Arrow	Arrow KEY	Changes the selection.
SELECT	SELECT	Selects icons or items.
SAVE	SAVE	Saves the current value and quits the OSD.
EXIT	EXIT	Quits the OSD.

■ Starting the OSD

To start the OSD and enter OSD mode, press the three corners of the touch panel in turn (upper left, upper right, and lower right) within 5 seconds. In OSD mode, the setting screen is displayed in the center of the screen. In this mode, the touch panel cannot be used to export data to external devices unless the settings for the OSD are completed.

NOTE
• OSD is not displayed when a SW 1-2 is ON.

■ Using the OSD

Icons on the screen are used to operate the OSD. After the OSD start-up, the top menu displays. Touching the icon you want to adjust displays its submenu or setting change screen. In the setting change screen, ◀ ▶ icons are used to change the setting. To apply the setting, press the SET button. Press the SAVE button to save the defined settings.

■ Quitting the OSD

To quit the OSD, press the SAVE or EXIT button in the top menu or leave the OSD as it is for at least 30 seconds.

IMPORTANT

- In the OSD, pressing the [SET] button applies the set value and enables the setting. The set value won't be canceled unless the power is turned OFF or the value is reset.
  If the power is turned OFF without saving the set value, that data will disappear. The last saved data will be read into the system when the FP starts. To enable the changed value, be sure to press the [SAVE] button.
- All the setting values, even though in process of the OSD settings, will be retained in condition of letting the OSD leave more than 30 seconds or by pressing the [EXIT] button. The OSD will keep those values and make them effective until power-off or a Reset command input.

Click Tone — Enables/disables the click sound. With this parameter, the sound level can also be adjusted.
(Default value: OFF <Click sound disabled>)

720x400 Mode — When an input data resolution of 720 x 400 is used in the VGA text mode, set this parameter to ON. For other resolutions, set this parameter to OFF.
(Default: OFF)

Auto off Disp — Enables/disables the screen display Auto OFF function and sets the time when the Auto OFF function is enabled.
(Default: OFF <Auto OFF function disabled>)

The Auto OFF function automatically turns off the display to prevent the screen from burning out when the touch panel is not used for some period of time. With this parameter, you can set the time interval to turn off the screen display (how much time passes before the screen display is turned off) when the touch panel is not used. If the touch panel is not touched over the set time, the backlight will automatically turns off.

Select the time period from 1 min, 3 min, 5 min, 10 min, and OFF (Auto OFF function disabled).

BL Alarm — Enables/disables the Backlight burnout detect function.
(Default: ON)
When a burned-out backlight is detected, the status LED flashes alternately green and red, or a steady orange. Touch-operation will be disabled when the backlight burns out, which prevents the FP from sending input signals to the PLC.

IMPORTANT • Normally, the FP unit detects a backlight burnout by monitoring the backlight's current flow, however, the FP may fail to detect this condition, depending on the type of backlight problem.
