# Device/PLC Connection Manuals

About the Device/PLC Connection Manuals

Prior to reading these manuals and setting up your device, be sure to read the "Important: Prior to reading the Device/PLC Connection manual" information. Also, be sure to download the "Preface for Trademark Rights, List of Units Supported, How to Read Manuals and Documentation Conventions" PDF file. Furthermore, be sure to keep all manual-related data in a safe, easy-to-find location.

## 2.23 **FATEK**

## 2.23.1 System Structure

The following describes the system structure for connecting to Fatek's Facon PLCs.

The Cable Diagrams mentioned in the following tables are listed in the section titled "2.23.2 Cable Diagrams".

#### **■** Facon FB Series (using CPU Direct Connection)

| CPU                   | Cable Diagram     | Cables      | GP/GLC        |
|-----------------------|-------------------|-------------|---------------|
|                       | +                 | •           |               |
| FB <sub>E</sub> -20MC | RS-232C           |             |               |
| FB <sub>F</sub> -28MC | (Cable Diagram 1) |             |               |
| FB <sub>F</sub> -40MC | RS-232C           | FATEK's     | GP/GLC Series |
|                       | (Cable Diagram 2) | FB-232PO-9F | GF/GLC Selles |
|                       | RS-422 2-wire     |             |               |
|                       | (Cable Diagram 3) |             |               |

#### **■** Facon FB Series (Link I/F)

| CPU                   | Link I/F Cable Diagram |                   | GP/GLC        |  |
|-----------------------|------------------------|-------------------|---------------|--|
|                       |                        | <del>(</del>      |               |  |
| FB <sub>E</sub> -20MC | RS-232C(Port 0) on     | RS-232C           |               |  |
| FB <sub>E</sub> -28MC | FB-DTBR                | (Cable Diagram 4) |               |  |
| FB <sub>F</sub> -40MC | RS-232C(Port 1) on     | RS-232C           | GP/GLC Series |  |
|                       | FB-DTBR *1             | (Cable Diagram 5) | Of ACC Selles |  |
|                       | RS-485(Port 2) on      | RS-422 2-Wire     |               |  |
|                       | FB-DTBR                | (Cable Diagram 6) |               |  |

<sup>\*19-</sup>Pin D-SUB Port.

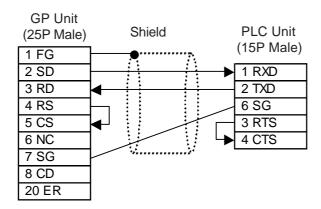

### 2.23.2 Cable Diagrams

The cable diagrams shown below and the cable diagrams recommended by FATEK may differ, however, regardless of these differences, using Digital's recommended diagrams will not cause any operation problems.

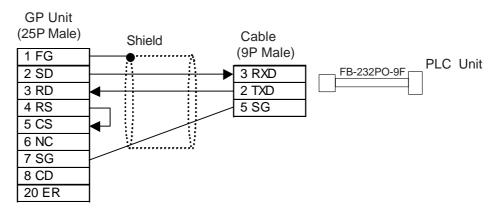

#### Cable Diagram 1 (RS-232C)

- Connect the shielded cable's FG line to the GP.
- When wiring your communication cable, be sure to connect the GP and PLC SG wires.
- Use a cable of length less than 15m.

#### Cable Diagram 2 (RS-232C)

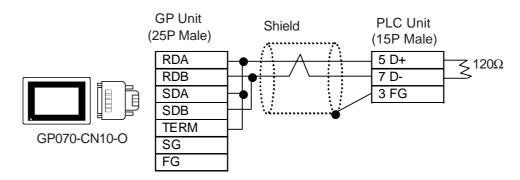

#### Cable Diagram 3 (RS-422 2-wire)

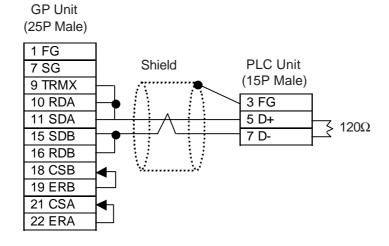

- Connect the shielded cable's FG line to the PLC.
- The maximum cable length allowed is 600m.

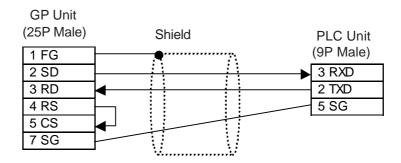

<When using Digital's RS-422 connector terminal adapter GP070-CN10-O>

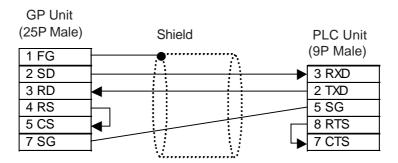

<When making your own cable>

#### Cable Diagram 4 (RS-232C)

#### Cable Diagram 5 (RS-232C)

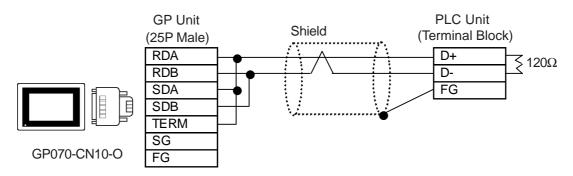

Cable Diagram 6 (RS-422 2-wire)

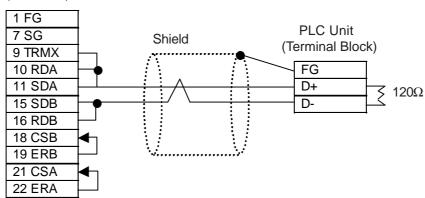

- Connect the shielded cable's FG line to the PLC.
- The maximum cable length allowed is 600m.

<When using Digital's RS-422 connector terminal adapter GP070-CN10-O>

<When making your own cable>

## 2.23.3 Supported Devices

The following describes the range of devices supported by the GP.

#### **■** Facon FB Series

|  | $\Box$ | etup | System | Area | here. |
|--|--------|------|--------|------|-------|
|--|--------|------|--------|------|-------|

| Device             | Bit Address         | Word Address        | Note                 |     |
|--------------------|---------------------|---------------------|----------------------|-----|
| Input Relay        | X0000 ~ X0255       | WX0000 ~ WX0240     | <u>÷ 16</u> )        |     |
| Output Relay       | Y0000 ~ Y0255       | WY0000 ~ WY0240     | <u>÷16</u> )         |     |
| S Relay            | S0000 ~ S0999       | WS0000 ~ WS0976     | <u>÷ 16</u> )        |     |
| Auxiliary Relay    | M0000 ~ M2001       | WM0000 ~ WM1984     | <u>÷16</u> )         |     |
| Timer (contact)    | T0000 ~ T0255       |                     |                      |     |
| Counter (contact)  | C0000 ~ C0255       |                     |                      |     |
| Timer (current)    |                     | TMR0000 ~ TMR0255   |                      |     |
| Counter (current)  |                     | CTR0000 ~ CTR0199   |                      |     |
| Hi Speed Counter   |                     | HC0200 ~ HC0255     | *2                   | 2   |
| Data Register *1   |                     | HR0000 ~ HR8071     | B i t 15) *3         | L/H |
| Data Register *1   | R0000000 ~ R0807115 | R00000 ~ R08071     | *5                   |     |
| Data Register      | D0000000 ~ D0307115 | D00000 ~ D03071     |                      |     |
| Special Relay      | SM1912 ~ SM2001     | WSM1912 ~ WSM1976   |                      |     |
| Input Register     |                     | IR3840 ~ IR3903     | <sub>В і t</sub> 15) |     |
| Output Register    |                     | OR3904 ~ OR3967     | <u>ві t</u> 15)      |     |
| HSC Register       |                     | HSC4096 ~ HSC4127   | B i t 15             |     |
| Calendar Register  |                     | RT C4128 ~ RT C4135 | <sub>В і t</sub> 15) |     |
| Special Register   |                     | SR4136 ~ SR4167     | B i t 15             |     |
| Read Only Register |                     | ROR5000 ~ ROR8071   | B i t 15] *4         | ļ   |

<sup>\*1</sup> Within the PLC, data registers HR and R constitute the same device. However, the method used to write bits to these devices vary as described below. Therefore, be sure to use the correct method depending on the system's specifications.

(Continued...)

- When performing a bit-designated write to an R device, one bit can be written at a time.
- When performing a bit-designated write to an HR device, the 15 bits other than the designated bit will all be set to OFF (0).
- \*2 32-bit device.
- \*3 Word addresses HR5000 to HR8071 and R05000 to R08071 are read-only. While writing data to these addresses will not cause an error, the data will not be recorded in the PLC's memory.
- \*4 Read-only device. While writing data to these devices will not cause an error, the data will not be recorded in the PLC's memory.

Note: Device address range and write enable/disable features vary depending on the CPU. For details, refer to the corresponding PLC manual.

## 2.23.4 Environment Setup

The following table lists Digital's recommended PLC and GP communication settings.

#### **■** Facon FB Series

| GP Settings          |             | Controller Settings |         |  |
|----------------------|-------------|---------------------|---------|--|
| Baud rate (bps)      | 9600bps     | Baud rate *1        | 9600bps |  |
| Data length          | 7bit        | Data bit *1         | 7bit    |  |
| Stop bit             | 1bit        | Stop Bit *1         | 1bit    |  |
| Parity Bit           | Even        | Parity *1           | Even    |  |
| Communication Format | RS-232C     |                     |         |  |
| when using RS-232C   | N3-232C     |                     |         |  |
| Communication Format | 2-wire type |                     |         |  |
| when using RS-485    | 2-wire type |                     |         |  |
| Unit No.             | 1           | Station Number      | 1       |  |
|                      |             | DSWBIT1             | OFF     |  |
|                      |             | DSWBIT1             | OFF     |  |

<sup>\*1</sup> For Port 0, the following parameters are fixed: Baud rate: 9600bps, Data bit: 7bit, Stop bit: 1bit, Parity: Even
